

Michael McCaul

Michael McCaul (MSc) is a guidelines development and evidence-based health care researcher with experience in clinical epidemiology, evidence synthesis and biostatistics. As a research methodologist, he has gained experience in conducting analysis of medical data, and translating best evidence to policy and practice through clinical practice guideline development. At the Centre for Evidence-based Health Care, part of the Division of Epidemiology and Biostatistics at Stellenbosch University, he provides essential leadership in biostatistical consulting and biostatistics literacy, research output, postgraduate and undergraduate education and knowledge translation activities.

Michael's publications have focused mainly on emergency care, evidence synthesis and guideline development. Michael is a GRADE working group member, and has been involved in various guideline development projects as a guideline panel member, methodologist and advisory board member. Prior to joining Stellenbosch University as a researcher, Michael lectured in emergency care and was an operational emergency care practitioner in Cape Town and Durban (South Africa). Michael is married to a beautiful wife, who is currently working as an orthopaedic registrar in Cape Town. In his spare time Michael enjoys hiking and trying not to drown while kitesurfing.
